

**Powerway iPortal delivers business critical documentation to a structured corporate Intranet site automatically, while still maintaining document control**

- Uses the Binders available in Powerway Desktop to retrieve documentation.
- Document list are automatically refreshed each time a request is made.
- Allows users to access business critical documentation through a standard Web browser while retaining document control.
- Expired, rescinded or documents to which a user has no access are not available through iPortal.
- Ensures the most current version of the document is always available on the corporate Intranet site.
- Allows a developer to integration iPortal fully with the corporate Intranet site.

Powerway iPortal allows organizations to distribute business critical documentation via a standard Web browser. Using the Binders facility from Powerway Desktop, users can retrieve the most current document documentation that is pertinent to their business function simply and easily.

## Maintained Security

Powerway iPortal maintains the document control that is available through Powerway Desktop. Providing only the documents to which the user has View access, organizations can publish all business critical documentation to the Intranet site while still maintaining document security.

Use of the Binders facility from Powerway Desktop also ensures that only current and available information is available through iPortal. The documentation request is refreshed each time a search is executed through iPortal, ensuring that the most current and relevant information is provided to the user.

## Powerway Suite 2000

Powerway's information technology drives innovation and quality throughout the product development process from concept and design through engineering, sourcing and manufacturing. Powerway's enterprise and supply chain solutions reduce risks and costs and accelerate product delivery by enabling connectivity, visibility and real-time information sharing.

Powerway software works together to provide complete paperless document and data control, advanced quality planning, integrated quality management and real-time factory floor data collection for optimum business process standardization and document management.

Suite 2000 helps your organization overcome the problems caused by a lack of communication and collaboration such as late engineering changes, product quality issues, scrap and rework, delayed product delivery and lost sales.
